

List of tables

Table 5-1. Decisions made by each of the two players in the PD when visiting a certain state of the world for the i -th time. In the first column, payoffs are denoted by their initial letter. In columns 2 to 5, the first letter in each pair corresponds to the decisions of one player, the second letter to those of the other. C is cooperation and D is defection. The first imbalance between CC and DD for every value of AT has been shadowed. The meaning of x and y is explained in the text. The results shown in this table are independent of the memory length.	95
Table 5-2. Effect on average cooperation rates of each of the two factors outlined in the text above depending on the value of AT , and results from the simulation runs.....	100
